

CHARGE YOUR CAR

Choose a method

-  Scan QR Code using your phone's camera
 - App-less. No sign up required
-  Scan QR Code using the VoltShare app's QR scanner
 - Save payment details
 - Live charging status

*Important: you will need to have stable internet connection before starting a session. Please note that the charging price is set by the venue owner. For any technical support, please contact VoltShare below.

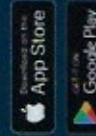

Start charging*

-  Plug in your car & lock your doors
-  Scan the QR code using your preferred method
-  Ensure the charging point is connected. If not, see FAQs below
-  Add a valid payment method & click start charging
-  Unplug the cable from your car to end the session
-  Replace the charging lead **once finished**

DESTINATION EV CHARGING

- **Important: After finishing your session**
Keep all cables coiled and ensure the charging lead is fully secured on the holster and/or tightly capped.
- **Not showing connected, session failed or stopped early**
Switch off the car and lock the doors. To reset the connection status, unplug the charging lead, wait 10s & plug it back in. Refresh app page / re-scan QR code to get an updated connection status.
- **Charging point status showing offline or unavailable**
Regularly refresh the app page (press back button) or web page for updated status as this may be due to intermittent internet loss.
